United States Department of Agriculture.

BUREAU OF ANIMAL INDUSTRY-CIRCULAR NO. 48.

D. E. SALMON, D. V. M., Chief of Bureau.

SCALES OF POINTS FOR JUDGING CATTLE OF DAIRY BREEDS.

Washington, D. C., June 18, 1904.

Frequent requests are received at this Department for the scales of points in use for judging cattle of the several breeds especially adapted to the dairy.

The scales authorized by different associations of breeders of this class of cattle were collected and published in the Fifteenth Annual Report of the Bureau of Animal Industry and afterwards reprinted as Circular No. 27 of that Bureau.

Numerous changes have since been made in the scales, and the latest authorized forms have therefore been again collected. All available are included in this circular, prepared by Maj. Henry E. Alvord, Chief of the Dairy Division, as a convenient means of furnishing the information so often sought.

Respectfully,

D. E. SALMON, Chief of Bureau.

Approved.

JAMES WILSON,

Secretary of Agriculture.

Dy.--57

AYRSHIRES.

Scale of points adopted by the Ayrshire Breeders' Association December 2, 1903.

FOR COWS.

The following scale of points for the Ayrshire cow was adopted, being similar to the scale adopted in Scotland in 1884, and changed in a few points to render it applicable to this country:

appl	licable to this country:	
		Points.
1.	Head medium in length, forehead wide, nose fine between the muzzle and	
	eyes, muzzle wide, eyes full and lively, causing a hollow in face; wide	
	between horns, inclining upward	10
2.	Neck moderately long, free from loose skin on underside, fine at its junc-	
	tion with the head, and enlarging symmetrically toward the shoulders.	Ę
3.	Fore quarters—shoulders sloping, withers fine, chest sufficiently broad and	
	deep to insure constitution, brisket and whole fore quarters light, the	
	cow gradually increasing in depth and width backward	ŀ
		•

		Points.
4. I	Back short and strong, spine well defined, especially at the shoulders; ribs	
	well sprung, giving large barrel capacity; the body deep at the flanks	10
5. F	Hind quarters long, broad, and straight, except at pelvic arch; hook bones wide apart, and not overlaid with fat; tail long, slender, and set	
	on a level with the back	7
6. T	Jdder capacious and not fleshy, hind part broad and firmly attached to	•
	the body, the sole nearly level and extending well forward; milk veins	
	about udder and abdomen well developed, the teats from 2½ to 3 inches	
	in length, equal in thickness—the thickness being in proportion to the length—hanging perpendicularly. Their distance apart at the sides	
	should be equal to one-third of the length of the vessel, and across to	
	one-half the breadth with no divisions between quarters of the udder	30
7. I	legs short in proportion to size, hind legs straight when viewed from	
	behind; thighs thin, giving plenty of room for udder	4
	Skin yellow, soft and elastic, and covered with soft, close woolly hair Color, red of any shade, brown or white, or a mixture of these, each color	5
٠. ر	being distinctly defined	3
	Average live weight in full milk about 1,000 pounds	8
	General appearance, including style and movement	10
12. 1	Escutcheon large and fine development	<u>3</u>

BROWN SWISS.

Scale of points adopted by the Brown Swiss Breeders' Association.

TOR.	COWS	

		Points.
	Head medium size and rather long	2
	Face dished, broad between the eyes and narrow between the horns	2
	Ears of a deep orange color within.	1
4.	Nose black, square, and with the mouth surrounded by a light, meal-	
_	colored band; tongue black	2
	Eyes full and placid	1
	Horns rather short, flattish, and regularly set, with black tips	5
	Neck straight, rather long, and not too heavy at shoulders	4
	Chest broad and deep.	4
	Back level to the setting on of the tail and broad across the loin	6
	Barrel hooped, broad, and deep at the flank	8
	Hips wide apart, rump long and broad	4
12.	Thighs wide, with heavy quarters	4
	Legs short and straight, with good hoofs	4
	Tail slender, pliable, not too long, with good switch	4 3
	Hide thin and movable	
10.	year gray; slight splashes of white near udder not objectionable; light	
	stripe along the back	
17	Hair between horns light, not reddish; hair on inside of ears light. (No	
17.	points.)	•
10	Fore udder full in form and carried up, reaching far forward on the abdo-	
10.	men	10
19	Hind udder not too deeply hung, full in form, and well up behind	10
	Teats rather large, set well apart and hanging straight down	5
	Milk veins prominent.	4
	Escutcheon high and broad and full in thighs	7
	Disposition quiet and good-natured	-
	Perfection	100
	For bulls and heifers omit judgment on Nos. 18, 19, and 20 (considering fect), and color should be brown.	them
	DEVONS.	
Sca	ale of points adopted at the third annual meeting of the American Devon	Cattle
	Club, Chicago, November 11, 1886.	
	FOR COWS.	Points.
1.	Head moderately long, with a broad, indented forehead, tapering consid-	
	erably toward the nostrils; the nose of a flesh color, nostrils high and	
	open, the jaws clean, the eye bright, lively, and prominent, and sur-	
	rounded by a flesh-colored ring, throat clean, ears thin, the expression	
	gentle and intelligent; horns matching, spreading, and gracefully turned	
	up, of a waxy color, tipped with a darker shade	
2.	Neck, upper line short, fine at head, widening and deep at withers, and	Į.
	strongly set to the shoulders	
	Shoulders fine, flat, and sloping, with strong arms and firm joints	
4.	Chest deep, broad, and somewhat circular in character	8

		Points.
5.	Ribs well sprung from the backbone, nicely arched, deep, with flanks fully developed	8
6.	Back straight and level from the withers to the setting on of the tail, loin broad and full, hips and rump of medium width and on a level with the	10
7.	back	16 8
	Udder not fleshy, coming well forward in line with the belly and well up behind; teats moderately large and squarely placed.	20
9.	Tail well set on at a right angle with the back, tapering, with a switch of	20
	white or roan hair, and reaching the hocks	2
	Legs straight, squarely placed when viewed from behind, not to cross or sweep in walking; hoof well formed	4
11.	Skin moderately thick and mellow, covered with an abundant coat of rich hair of a red color; no white spot admissible, except the udder	8
12.	Size, minimum weight at 3 years old, 1,000 pounds	2
	General appearance as indicated by stylish and quick movement, form, constitution and vigor, and the under line as nearly as possible parallel with the line of the back.	8
	-	
	Perfection	100
	FOR BULLS.	
1.	Head masculine, full, and broad, tapering toward the nose, which should be flesh-colored; nostrils high and open; muzzle broad; eyes full and placid and surrounded with flesh-colored ring; ears of medium size and thickness; horns medium size, growing at right angles from the head or slightly elevated, waxy at the base, tipped with a darker shade	10
	Cheek full and broad at root of tongue; throat clean	2
3.	Neck of medium length and muscular, widening from the head to the shoulders and strongly set on	. 4
4.	Shoulders fine, flat, sloping, and well-fleshed; arms strong, with firm joints	6
5.	Chest deep, broad, and somewhat circular.	10
6.	Ribs well sprung from the backbone, nicely arched, deep, with flanks	
7.	fully developed	10
	back	20
	Hind quarters deep, thick, and square	12
9.	Tail well set on a right angle with the back, tapering, with a switch of white or roan hair, and reaching the hocks	2
10.	Legs short, straight, and squarely placed when viewed from behind, not to cross or sweep in walking; hoof well formed	4
11.	Skin moderately thick and mellow, covered with an abundant coat of rich	•
10	hair of a red color; no white spot admissible unless around the purse	8
12. 13.	Size, minimum weight at 3 years old, 1,400 pounds. General appearance, as indicated by stylish and quick movement, form,	4
	constitution, and vigor, and the under line as nearly as possible parallel with the line of the back.	8
	Perfection	100

DUTCH BELTED.

Scale of points adopted by the Dutch Belted Cattle Association.

	FOR COWS.	Points.
1.	Body: Color, black, with clearly defined continuous white belt; the belt to be of medium width, beginning behind the shoulder and extending	romus.
2	nearly to the hips	8
	poll prominent; muzzle fine; dark tongue	6
	Eyes black, full, and mild; horns long compared with their diameter Neck fine and moderately thin, and should harmonize in symmetry with	4
5.	the head and shoulders	6
6.	. Barrel large and deep, with well-developed abdomen; ribs well rounded	10
7.	and free from fat	10 10
8.	Rump high, long, and broad	6
9.	Hind quarters long and deep, rear line incurving; tail long, slim, tapering to a full switch	8
10.	Legs short, clean, standing well apart	3
11.	 Udder large, well-developed front and rear; teats of convenient size and wide apart; mammary veins large, long, and crooked, entering large 	
	orifices.	20
	Escutcheon.	2
13.	Hair fine and soft; skin of moderate thickness, of a rich dark or yellow color	3
14.	Quiet disposition and free from excessive fat.	4
	General condition and apparent constitution	6
	Perfection	100
	FOR BULLS.	
tha	The scale of points for males shall be the same as those given for females, eat No. 11 shall be omitted and the bull credited 10 points for size and wide-sacing of rudimentary teats, and 10 additional points for perfection of belt.	
1	seing of rudinientary teats, and to additional points for perfection of bent.

horns amber colored curving, and not coarse	8
Size for the breed: Mature bulls, 4 years old or over, about 1,500 pounds. General appearance as indicative of the power to beget animals of strong	4
dairy qualities	10
dairy quartotos	10

EXPLANATORY NOTES BY THE COMMITTEE.

We recognize the Guernsey should be-

First. A dairy animal with a distinctive dairy temperament and conformation, having a strong, nervy structure with a corresponding flow of nervous energy, and every indication of capacity and vitality.

Second. In color of hair, a shade of fawn, with white on limbs and underpart of body are considered the prevailing markings, and some degree of uniformity is desirable.

Third. One of the important distinguishing features of the breed is the presence of a yellow color in the pigment of the skin, which is indicative of rich golden color in the milk. This is very pronounced in the Guernsey and held by her to the greatest extent under all conditions of stabling and feed. The intensity of this trait is more marked in some animals and families than in others, but it should be kept at the highest standard. It is fast being recognized that this color is accompanied by a superior flavor in the milk and thus in the butter.

DAIRY TEMPERAMENT.

By "dairy temperament" is meant a strong overruling predisposition or tendency to turn the consumption of food toward the production of milk with a high content of solids, especially butter fat, as against the constitutional tendency so often seen to turn food into flesh. Even in the strongest dairy breeds there are more or less frequent outcrops in male and female of the flesh-making temperament. To breed from such animals while we are striving to establish a prepotent dairy temperament or tendency is not wise. All cattle bred specifically for dairy purposes should possess a clear and decided dairy temperament, for it is that quality of character we most desire to establish, enlarge, and perpetuate in the Guernsey cow.

This is especially indicated by the shape of the head, showing brain capacity, wide muzzle, open nostril, full bright eyes, feminine neck, and a construction of the backbone indicating a strong flow of nerve power and support from the brain to all of the maternal organs.

CONSTITUTION.

In breeding our domestic animals, especially for long service, like the dairy cow, it is very important that they should have abundant vital power, which we call "constitution." But constitution must be judged and measured by the peculiar function the animal is bred to fulfill. With the race horse the function is speed; with the steer, the laying on of flesh; with the dairy cow, the production of milk solids. In all these various functions the animal that is to represent any one of them must show not only large capacity in the line of that function, but also the ability to endure long and well the strain of such function and keep in good health. Constitution is best indicated by a full development at the navel, and strong abdominal walls, showing that the animal when in a prenatal state was abundantly nourished by the mother through a well-developed umbilical cord.

PREPOTENCY.

In the scale for bulls, for the first time, we believe, in the history of dairy breeds, this point is introduced. The reason we have included it is that "prepotency" is the chief consideration in the selection of all male breeding animals. The pedigree and conformation is often all that can be desired, but because the bull is lacking in prepotent breeding power he is an expensive failure. This quality is, in a sense, difficult to perceive or describe, but we know certain animals have it in high degree and others fail of it completely. It is fairly well indicated by vigor of appearance, strong resolute bearing, and abundant nervous energy. We would distinguish this from an ugly disposition. A bull is ugly by the way he is handled

rather than by his breeding. What we want is strong impressive blood. A dull, sluggish spirit and action we consider indicative of a lack of true dairy prepotency, but we would prefer to breed to a rather sluggish-appearing bull with first-class rudimentaries than to a stylish one with badly placed rudimentaries.

RUDIMENTARY TEATS.

We consider that a well-balanced and well-shaped udder in the cow is largely due to the way the rudimentary teats are placed on the sire. If they are crowded close together, the result is likely to be narrow-pointed udders. If they are placed well apart, of good size, and well forward of the scrotum, the effect, we think, will be to influence largely the production of well-shaped udders in the resulting heifers and counteract the tendency to ill-shaped udders inheritable from dams deficient in this respect. We believe the future excellence of the Guernsey cow will be greatly aided by close attention on the part of her breeders to this point.

HOLSTEIN-FRIESIAN.

Scale of points in use by the Holstein-Friesian Association of America, revised and adopted June 1, 1904.

FOR COWS.	Detection :
Head decidedly feminine in appearance, fine in contour.	Points.
Forehead broad between the eyes, dishing	2
Face of medium length, clean and trim, especially under the eyes, showing	_
facial weins, the bridge of the nose straight.	
Muzzle broad, with strong lips.	
Ears of medium size, of fine texture, the hair plentiful and soft, the secretions	
oily and abundant	
Eyes large, full, mild, bright.	
Horns small, tapering finely toward the tips, set moderately narrow at base,	
oval, inclining forward, well-bent inward, of fine texture, in appearance)
waxy	1.
Neck long, fine and clean at juncture with the head, free from dewlap, evenly	
and smoothly joined to shoulders	
Shoulders slightly lower than hips, fine and even over tops, moderately broad	
and full at sides	
Chest of moderate depth and lowness, smooth and moderately full in the	
brisket, full in the foreflanks [or through at the heart]	
Crops moderately full.	2
Chine straight, strong, broadly developed with open vertebræ	
Barrel long, of wedge shape, well rounded, with a large abdomen, trimly held	
up [in judging the last item age must be considered]	
Loin and hips broad, level or nearly level between the hook bones, level and	
strong laterally, spreading from chine broadly and nearly level, hook bones fairly prominent.	. 6
Rump long, high, broad, with roomy pelvis, nearly level laterally, compara-	
tively full above the thurl, carried out straight to dropping of tail	
Thurl high, broad.	. 3
Quarters deep, straight behind; twist filled with development of udder, wide	_
and moderately full at the sides	
Flanks deep, comparatively full	
Legs comparatively short, clean and nearly straight, wide apart, firmly and	
squarely set under the body, feet of medium size, round, solid, and deep	

	Points.
Tail large at base, the setting well back, tapering finely to switch, the end of	٠.
the bone reaching to hocks or below, the switch full	2
Hair and handling—Hair healthful in appearance, fine, soft, and furry, the	
skin of medium thickness and loose, mellow under the hand, the secretions	
oily, abundant, and of a rich brown or yellow color	8
Mammary veins very large, very crooked (age must be taken into considera-	
tion in judging of size and crookedness), entering very large or numerous	
orifices, double extension, with special developments such as branches, con-	
nections, etc	10
Udder and teats very capacious, very flexible, quarters even, nearly filling the	
space in the rear below the twist, extending well forward in front, broad and	
well held up	12
Teats well formed, wide apart, plumb and of convenient size	2
Escutcheon largest, finest	2
Perfection	100
renection	100
FOR BULLS.	
Head showing full vigor; elegant in contour	2
Forehead broad between the eyes, dishing	2
Face of medium length; clean and trim, especially under the eyes; the bridge	_
of the nose straight	2
Muzzle broad, with strong lips	1
Ears of medium size, of fine texture; the hair plentiful and soft; the secretions	_
oily and abundant	1
Eyes large, full, mild, bright.	2
Horns short, of medium size at base, gradually diminishing toward tips;	
oval, inclining forward; moderately curved inward; of fine texture; in	_
appearance waxy	1
Neck long; finely crested (if the animal is mature); fine and clean at juncture	
with the head; nearly free from dewlap; strongly and smoothly joined to	_
shoulders	5
Shoulders of medium height; of medium thickness, and smoothly rounded at	
tops; broad and full at sides; smooth over front	4
Chest deep and low; well filled and smooth in the brisket; broad between the	_
forearms; full in the foreflanks [or through at the heart]	7
Crops comparatively full; nearly level with the shoulders	4
Chine strong; straight; broadly developed with open vertebre	6
Barrel long, well rounded, with large abdomen; strongly and trimly held up.	7
Loin and hips broad, level or nearly level between hook bones; level and strong	
laterally; spreading from the chine broadly and nearly level; the hook bones	_
fairly prominent.	7
Rump long, broad, high, nearly level laterally; comparatively full above the	,
thurl; carried out straight to dropping of tail	7
Thurl high, broad	. 4
	_
twist	5
Flanks deep, full	2
Legs comparatively short, clean, and nearly straight; wide apart; firmly and squarely set under the body; arms wide, strong, and tapering; feet of	
medium size, round, solid, and deep	5
Tail large at base, the setting well back; tapering finely to switch; the end of	o
bone reaching to hocks or below; the switch full	2
WYSEL STREET AND TO ALCOME OF TOTAL TOTAL STREET, THE SECOND SECO	

Hair and handling—Hair healthful in appearance, fine, soft, and furry; skin of medium thickness and loose; mellow under the hand; the secretions oily,	Points.
abundant, and of a rich brown or yellow color Mammary veins—Large, full, entering large orifices; double extension; with special developments, such as forks, branches, connections, etc	10
Escutcheon largest, finest	2
Perfection	100
JERSEYS.	
Scale of points adopted by the American Jersey Cattle Club at their annual med held May 6, 1903.	eeting
FOR COWS.	Points.
Head: A, medium size, lean; face dished; broad between eyes and narrow	
between horns	4
with muscular lips; strong under jaw	3 5
Body: A, lung capacity, as indicated by depth and breadth through body, just back of fore legs.	5
B, wedge shape, with deep, large paunch, legs proportionate to size and of fine quality.	10
C, back straight to hip bones	2
D, rump long to tail setting and level from hip bones to rump bones E, hip bones high and wide apart; loins broad, strong	8 5
F, thighs flat and well cut out	3 2
Udder: A, large size and not fleshy	6 4
C, fore udder full and well rounded, running well forward of front teats.	10
D, rear udder well rounded, and well out and up behind	8
Milk veins, large, tortuous, and elastic	4 3
General appearance, a symmetrical balancing of all the parts, and a proportion of parts to each other, depending on size of animal, with the general appearance of a high-class animal, with capacity for food and pro-	
ductiveness at pail	10
Perfection	100
FOR BULLS.	
Head: A, broad, medium length; face dished; narrow between horns; horns medium in size and incurving	5
B, muzzle broad, nostrils open, eyes full and bold; entire expression one of vigor, resolution, and masculinity	5
Neck, medium length, with full crest at maturity; clean at throat	10 15
B barrel long, of good depth and breadth, with strong, well-sprung ribs.	15

	Points.
Body: C, back straight to hip bones	2
D, rump of good length and proportion to size of body, and level from	
hip bone to rump bone	7
E, loins broad and strong; hips rounded and of medium width compared	
with female	7
F, thighs rather flat, well cut up behind, high arched flank	3
G, legs proportionate to size and of fine quality, well apart, and not to	ı
weave or cross in walking	5
Rudimentary teats, well placed	2
Tail, thin, long, with good switch, not coarse at setting on	4
Size, mature bulls, 1,200 to 1,500 pounds	5
General appearance, thoroughly masculine in character, with a harmonious	ı
blending of the parts to each other; thoroughly robust, and such an ani-	
mal as in a herd of wild cattle would likely become master of the herd	
by the law of natural selection and survival of the fittest	15
Perfection	100

POLLED DURHAMS.

[Note.—These cattle are recorded in the Shorthorn Herd Book and have all the characteristics of Shorthorns, excepting only the absence of horns. The American Polled Durham Breeders' Association has never formulated a scale of points, but the scale applying to Shorthorn cattle would apply to these, except in the hornless feature. The head is the same as the head of the Shorthorn, excepting poll; it should not be as pointed as the head of a Red Poll animal, but gently rounded at the crown.]

POLLED JERSEYS.

[Note.—The American Polled Jersey Cattle Club accepts the scale of points of the American Jersey Cattle Club for Jerseys, excepting only "Horns, small to medium, incurying," for which they substitute "Head smooth, without scurs or rudimentary horns."]

RED POLLS.

The "standard description" of Red Polled cattle.

[Note.—The Red Polled Cattle Club of America having adopted no scale of points for judging animals of the breed, the following "standard description" is published instead.]

ESSENTIALS.

Color, red. The switch of the tail should be mixed with white. A portion of the udder may be white, and also a little white on the belly along the milk veins. Any additional white markings shall disqualify.

Polled.—There must be no horns, slugs, or abortive horns. Should any animal which has been admitted to registry afterwards develop horns or scurs, the registration of such animal shall be canceled and its progeny debarred from registration.

POINTS OF A SUPERIOR ANIMAL.

Color, a deep red, with udder of the same color, but the switch of the tail should be mixed with white; nose not dark or cloudy.

Form: A neat head and throat; a full eye; a tuft or crest of hair should hang over the forehead; the frontal bones should begin to contract a little above the eyes and should terminate in a comparatively narrow prominence at the summit of the head.

In all other particulars the commonly accepted points of a superior animal are to be taken as applying to the Red Polled cattle.

SHORTHORNS.

Scale of points.

[Note.—The American Shorthorn Breeders' Association has adopted no scale for judging cattle, but its secretary recommends the following revision of the scale of points established by the Massachusetts State Board of Agriculture.]

FOR COWS. Points. 1. Head small, lean, and bony, tapering to the muzzle, face somewhat long, 3 the fleshy portion of the nose of a light, delicate color.... 2. Eye is of great significance, and should be prominent, bright, and clear, "prominent" from an accumulation of "adeps" in the back part of its socket, which indicates a tendency to lay on fat, "bright" as an evidence of a good disposition, "clear" as a guaranty of the animal's health; whereas a dull, sluggish eye belongs to a slow feeder, and a wild, restless eye betrays an unquiet, fitful temper..... 2 3. Horns light in substance and waxy in color, and symmetrically set on head; the ear large, thin, and with considerable action..... 1 4. Neck rather short than long, tapering to the head, clean in the throat, and full at its base, thus covering and filling out the points of the 5. Chest broad from point to point of the shoulders, deep from the anterior dorsal vertebra to the floor of the sternum, and both round and full just back of the elbows, sometimes designated by the phrase "thick through the heart." These are unquestionably the most important points in every animal, as constitution must depend on their perfect development and the ample room thus afforded for the free action of the heart and lungs 12 6. Brisket, however deep or projecting, must not be confounded with capacity of chest, for, though a very attractive and selling point, it in reality adds nothing to the space within, however it may increase the girth without. It is, in fact, nothing more nor less than a muscular adipose substance attached to the anterior portion of the sternum, or breastbone, and thence extending itself back. This form, however, of the brisket indicates a disposition to lay on fat generally throughout the frame, and in this point of view is valuable 2 7. Shoulder, where weight, as in the Shorthorn, is the object, should be somewhat upright and of good width at the points, with the bladebone just sufficiently curved to blend its upper portion smoothly with the crops 8. Crops must be full and level with the shoulders and back, and is, perhaps, one of the most difficult points to breed right in a Shorthorn 8 9. Back, loin, and hips should be broad and wide, forming a straight and even line from the neck to the setting on of the tail, the hips round and well covered 8 10. Rumps laid up high, with plenty of flesh on their extremities..... 4 11. Pelvis should be large, indicated by the width of the hips (as already mentioned) and the breadth of the twist..... 4 12. Twist should be so well filled out in its "seam" as to form nearly an even and wide plain between the thighs..... 3 13. Quarters long, straight, and well developed downwards..... 5 14. Carcass round, the ribs nearly circular and extending well back 4 15. Flanks deep, wide, and full in proportion to condition 2 16. Legs short, straight, and standing square with the body..... 2

		Points.
	Plates of the belly strong, and thus preserving nearly a straight underline.	3
18.	Tail flat and broad at its root, but fine in its cord, and placed high up and	
	on a level with the rumps.	2
19.	Carriage of an animal gives style and beauty; the walk should be square	
	and the step quick, the head up	2
20.	Quality. On this the thriftiness, the feeding properties, and the value of the animal depend; and upon the touch of this quality rests, in a good measure, the grazier's and the butcher's judgment. If the "touch" be good, some deficiency of form may be excused; but if it be hard and stiff, nothing can compensate for so unpromising a feature. In raising the skin from the body, between the thumb and the finger, it should have a soft, flexible, and substantial feel, and when beneath the outspread hand it should move easily with it and under it, as though resting on a soft, elastic, cellular substance, which, however, becomes firmer as	
	the animal ripens. A thin, papery skin is objectionable, more especially	
	in a cold climate	15
21.	Coat should be thick, short, and mossy, with longer hair in winter; fine,	
	soft, and glossy in summer	2
2 2.	Udder pliable and thin in its texture, reaching well forward, roomy behind,	
	and the teats standing wide apart and of convenient size	10
	Dayfootion	100

FOR BULLS.

As regards the male animal, it is only necessary to remark that the points desirable in the female are generally so in the male, but must, of course, be attended by that masculine character which is inseparable from a strong, vigorous constitution. Even a certain degree of coarseness is admissible, but then it must be so exclusively of a masculine description as never to be discovered in the female of his get.

In contradistinction to the cow, the head of the bull may be shorter, the frontal bone broader, and the occipital flat and stronger, that it may receive and sustain the horn, and this latter may be excused if a little heavy at the base so its upward form, its quality, and color be right. Neither is the looseness of the skin attached to and depending from the under jaw to be deemed other than a feature of the sex, provided it is not extended beyond the bone, but leaves the gullet and throat clean and free from dewlap.

The upper portion of the neck should be full and muscular, for it is an indication of strength, power, and constitution. The spine should be strong, the bones of the loin long and broad, and the whole muscular system wide and thoroughly developed over the entire frame.
